Forecast for Saturday 23 Oct 2021

Weather: Rather cloudy and damp overnight, with valley mist and banks of low cloud, although it should become largely dry into daybreak, with the strengthening breeze gradually lifting mist into low cloud. Saturday should be rather cloudy throughout, perhaps with some limited brighter interludes in the east later, ahead of an eventual thickening and lowering of cloud once again, with patchy late evening rain possible. Winds will strengthen in earnest later in the day, with a risk of gales hampering late descents.

Chance of cloud free mountain/hill tops above 600m: Perhaps peaking at 60 percent in the east during the afternoon.

Visibility: Poor in early mist, but otherwise improving good. Early mist lifting slowly as wind increases, perhaps narrowly clearing the highest ground by lunch before descending again into the evening, perhaps eventaully 500 metres on windward ground.

Meteorologist's View

Increasing windchill despite relatively mild temperatures. Winds strengthening gale during the eveningat modest elevation, with care required given deteriorating visibilities and a lowering cloud deck.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Fri 22 Oct 2021	0mm	3.2mm	50.6mm

Forecast for Sunday 24 Oct 2021

Weather: Wet and windy during the morning, with gales in exposure. These conditions clearing eastwards towards lunch, leaving a legacy of scattered blustery showers, these mainly affecting the west. Probably on the cloudy side even after the main rain clears, with the best of limited brighter interludes in the east.

Maximum wind: Southwesterly 50mph. Gradually easing.

Chance of cloud free mountain/hill tops above 600m: Perhaps 30 percent, mainly later in the east.

Visibility: Moderate improving very good, although deteriorations in showers.

Temperature: **Valleys:** Plus 6 becoming plus 14 Celsius.
At 600m: Plus 9 Celsius.
Freezing level: Above the summits.
